To Whom It May Concern

Our medical practice has had the misfortune of being broken into twice within 15 days. On both occasions our front gate was derailed, both the entrance security gate and front door were forced open with a crowbar type instrument.

Four computers were stolen from the reception desk, doctor's consulting room and chiropractor's reception within the short time period of 5 minutes.

In the time between the two burglaries we contacted Ian Collis of Compusafe and had a Compusafe and cables fitted to all the computers in the practice. Ian was most helpful in security advice and the Compusafe systems were installed quickly and expertly without disrupting our normal working day.

When the second break in occurred the criminals got absolutely nothing. I believe the criminals have been given a definite message and lesson – you don't get computers secured by Compusafe.

Thank you Ian.

Why make it easy for the criminals? We definitely recommend that Compusafes and cables are a must for every business.

For any further queries, please do not hesitate to contact us.

Yours faithfully

Dr Andre Postma
