To Whom It May Concern:

- This is to testify to the effectiveness of the protection devices sold to us by Compusafe.
- Our teaching centre is dependent on a number of computers on which the students work.
- Some years ago we had a break-in when 6 of our newest computers were stolen.
- We approached Ian Colls of Compusafe, who advised the use of cages around the computers and cables through the back of the screens.
- We installed these.
- Recently, in May 2016, we had an intrusion into our centre, the first since that original break-in.
- The only computer that was taken was the one which had not been caged.
- The robbers managed to extract two screens from the cables, but that is two out of fifty.
- Based on this experience I am confident that cages and cables are effective deterrents if the robbers do not have the time to work their way around them.
- We are connected to Secure Link so expect a physical presence from them within 10 minutes of the alarm being triggered.

Thank you to Ian.

Sincerely

Peter Southey
