Dear Ian

At 19h50 on the 06 August 2013 our premises were broken into by 3 BM driving a black Audi.

They cut the locks off the security gate and used a crowbar to force open the wooden door.

When I arrived at the office, after being contacted by the security company, they asked if anything was taken. I searched the offices and the only thing that was found, was that my laptop was lying on the floor.

All the computers, including my laptop, were secured using your fantastic cable system, they tried but they failed!

The amazing thing is, 1 minute after leaving my premises they broke into another company down the road and within 3 minutes stole 3 computers. Their machines were not secured your fantastic product.

Regards

Craig Groenewald
